1. DESCRIPTION OF APPLICATION

HeyListen is a music playing database system where there are several user types such as guest, musician(artist), and production company.

Guest represents regular users who can create playlists and follow other guests, playlists, artists. Guests can view the activities of the people they are following on their main page. These activities include: following a playlist, friend, and liking, disliking, sharing playlists and songs. Guests should buy songs or albums in order to listen them. User can add budget by their credit card information. Guests can discover new songs in discover page where they can view trending songs and buy them. They can also search other users, songs, albums, singers and production companies. They can create playlists out of the songs they have bought. Users can comment on playlists and they can like/dislike these playlists. Guests can share playlists, songs. Moreover, guests can create new groups to socialize with people that have similar music tastes. In these groups, people can share songs and playlists. Group members can collaboratively create new playlists which demonstrates combined music taste of group members. Musician(artist) can do all the things that a guest can do such as creating a group, sharing playlist and etc. In addition, musicians can add new songs and albums to the database. Production company can view statistical data about the songs they have produced. These statistical data include: number of sells, number of listens, number of follows an etc.

2. DISTRIBUTION OF WORK

Every group member worked on every page of the HeyListen both in terms of SQL queries and PHP code to connect the application logic with the database. EN SON YAZARIZ SPESİFİK OLARAK HERKESİN NE YAPTIĞINI.

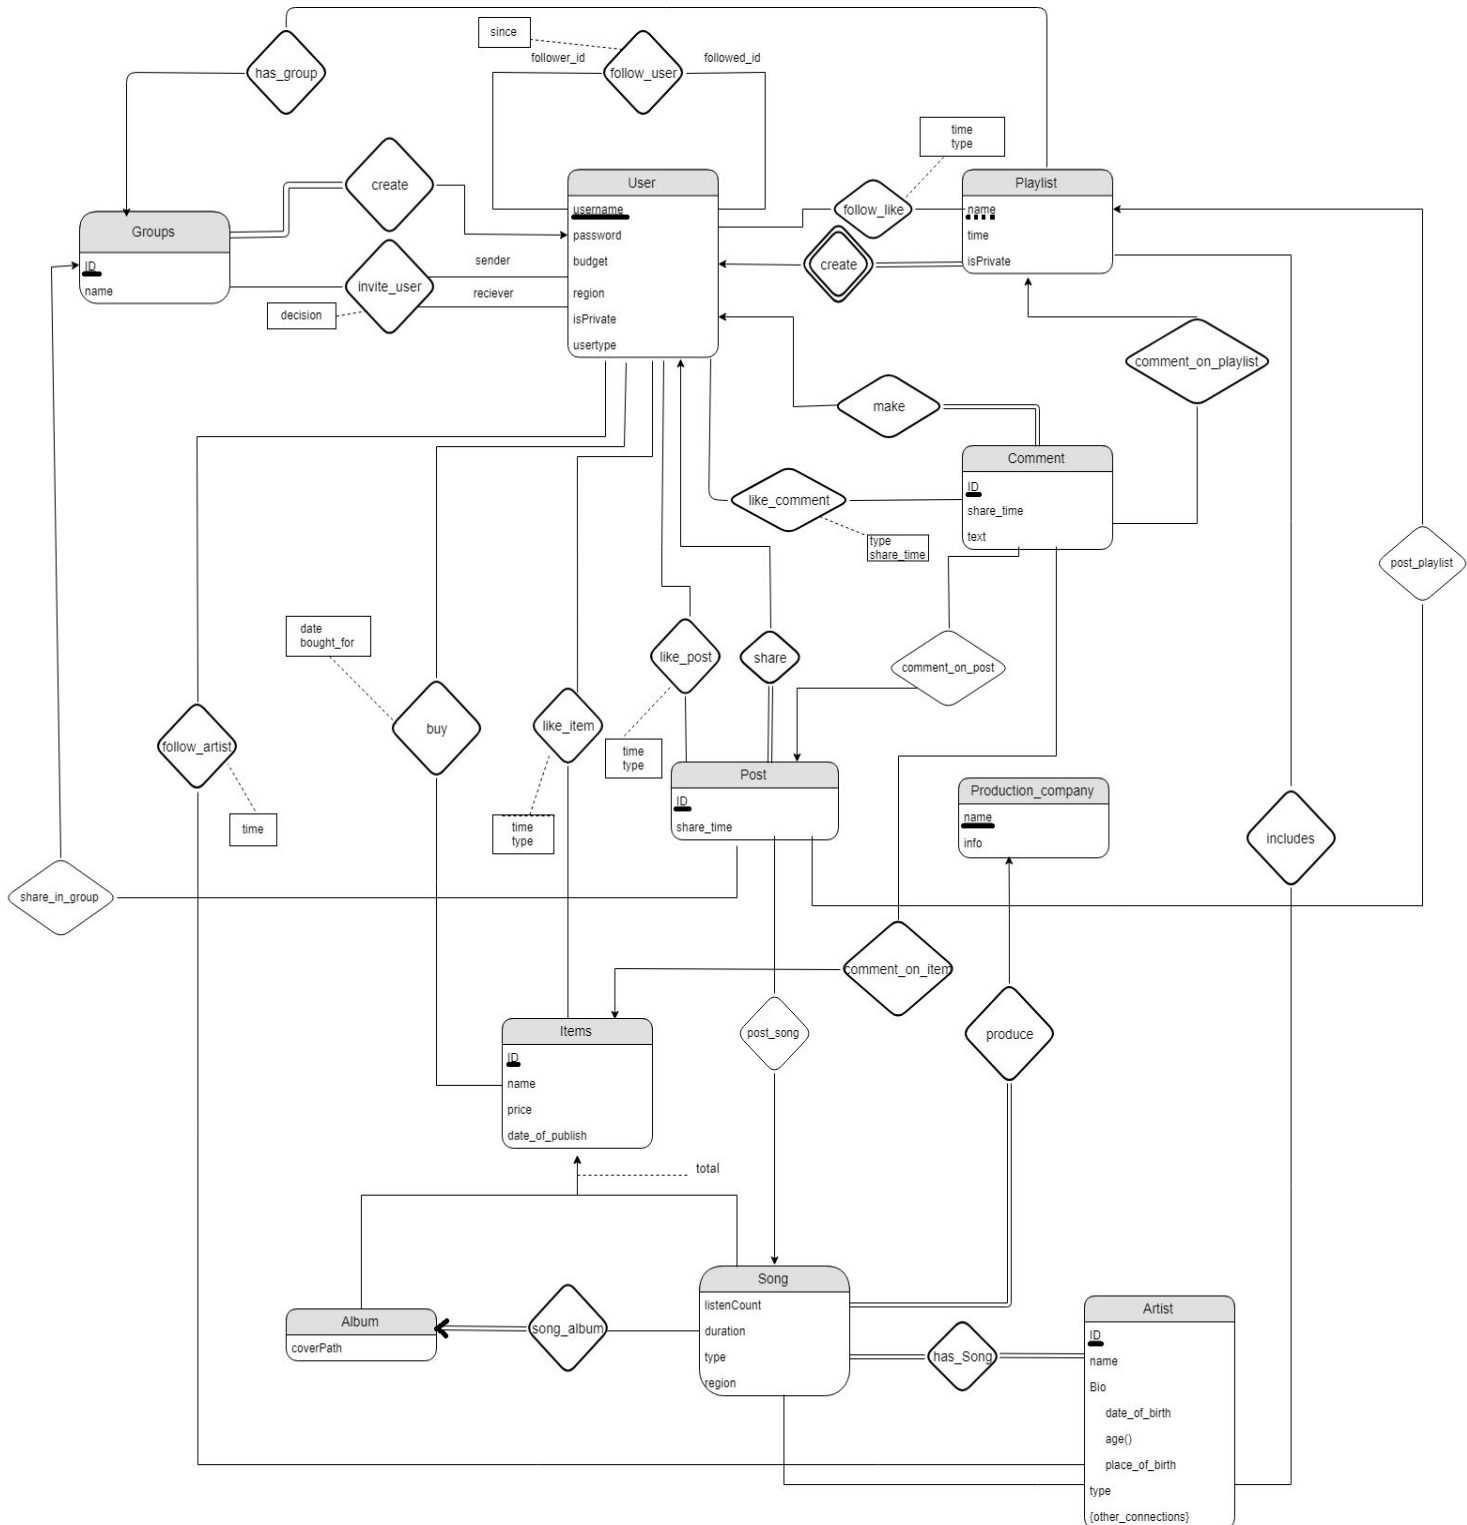

Anıl- worked on login, register, discover and group pages. Also worked on adding a song to a playlist, adding budget with card information, creating/deleting a playlist, creating/removing groups and following/unfollowing other users.

Berk- worked on overview and main page to show friends' and your activity; on comment, playlist, playlists, artist pages; on designing base UIs for all pages and on advanced db components.

Arkın- worked on playlist, playlists, artist, production company, group and album pages and made some improvements on UI.

Irem- worked on search, playlists, playlist, songs, song, follower, following pages, made some improvements on UI, worked on advanced db components

FK: (playlistOwner,playlistName) references playlist(username,name)

5.0 IMPLEMENTATION DETAILS

In this project, mainly PHP is used as backend, for some pages we need to use JavaScript as well. For frontend HTML is used and to build a better UI Bootstrap is used as a framework. MariaDB database in djikstra is used to store data. MYSQL is used to build database and for data retrieval and modification.

Webpage can be found in the following link:

Sometimes it is hard to connect server and client, when a button is clicked or a link is clicked, certain actions should be taken and it can be hard to achieve it. When there is an error in php file, we have hard times to detect them, therefore implementing a page takes a lot of time. Secondly, in order to display user activities on the main page, several results are taken from different queries like follow_user, follow_playlist and like_playlist etc. As there are several results, for each result a php object is created and they are collected in an array and sorted according to their time. As each result is limited by 10, it does not require a huge array.

6.0 ADVANCED DATABASE FEATURES

6.1 VIEWS

The shared songs by the user can be found with the following view, it is used for overview page of the user.

- **Display songs that user shared in her profile**

```
CREATE VIEW songPostOnUserPage( name, duration, type, share_time) AS
  SELECT I.name, S.duration, S.type , P2.share_time
  FROM post_song P1, items I, song S, post P2
  WHERE I.ID = P1.s_ID AND I.ID = s.ID AND P2.ID = P1.p_ID
  ORDER BY P2.share_time DESC
  LIMIT 10 ;
```

- **View is used to find which songs are bought by user:**

```
CREATE VIEW A AS select I.ID, I.name, S.type,S.region,I.price from song S, items I
, buy B where S.ID = I.ID and B.itemID = I.ID;
```

This view is used frequently, an example is given in 5.2, it used to check whether a song is bought or not, in pages where is buy option. This view is used in a query.

6.2 STORED PROCEDURES/ REPORTS

In our database, reports are stored as a procedure to access them easier as they are complex queries. These two reports are used in order to view most sold song type and in which region the song is sold.

6.2.1 View most sold song type with how many times does it sold

delimiter //

```
create procedure showMostSoldType3( out count INT ,out typess VARCHAR(45))
begin
select
  max(B.c) into count
from
  (
```

```

select count(*) as c,
       type as types
from A
group by type
) as B ;

select B.types into typess
from
(
  select count(*) as c, type as types
  from A
  group by type
) as B ;

end;
//

```

Output:

```

MariaDB [iremural]> call showMostSoldType3(@max,@type);
Query OK, 1 row affected (0.01 sec)

MariaDB [iremural]> select @max,@type;
+-----+-----+
| @max | @type |
+-----+-----+
|     4 | pop   |
+-----+-----+
1 row in set (0.00 sec)

```

6.2.1 View most sold song number with it's region

delimiter //

```

create procedure showMostSoldRegion1( out count INT ,out regions
VARCHAR(45))
begin
select
  max(B.c) as count
from
  ( select count(*) as c, region as regions from A group by region
  ) as B ;

select

```

```

B.regions into regionss
from
( select  region as regions from A group by region ) as B ;

end;
//

```

Output:

```

MariaDB [iremural]> select @count2,@region2;
+-----+-----+
| @count2 | @region2 |
+-----+-----+
|         4 | UK       |
+-----+-----+
1 row in set (0.00 sec)

```

6.3 TRIGGERS

1- If the user is registering as an artist then insert that user into artist table with the following trigger:

```

DELIMITER //
CREATE TRIGGER trigArtist
AFTER INSERT ON user
FOR EACH ROW
BEGIN
    IF NEW.usertype = 2 THEN
        INSERT into artist(name,artistType) values (NEW.username,NEW.usertype);
    END IF;
END; //

```

2- When user buys an item and the buy entity is updated, the budget of the user is decremented in the same amount.

```

DELIMITER //
CREATE TRIGGER decreaseBudget
AFTER INSERT ON buy
FOR EACH ROW
BEGIN

```

```
UPDATE user SET budget = budget - (select price from items where ID =  
NEW.itemID) where username = NEW.buyer;  
END; //
```

6.4 CONSTRAINTS

1. Users must register to the system to use this web based application. If they already have an account they should first login to the system.
2. User must buy the song in order to listen it.
3. There can be at most 10 posts in the overview pages.
4. Posts can have either song or playlist.
5. One post can be shared in group or in the main page.
6. User cannot post empty posts or comments.
7. For playlist follow_like type attribute can be 1, up to 5.
 - 1 for follow
 - 2 to unfollow a playlist
 - 3 for like
 - 4 for dislike

Production Company

User can create a new account in this page. User name, password, country and user type must be provided. All fields must be filled, two entered passwords must be equal, password must be at least 6 characters and user name must not be taken before. User must choose

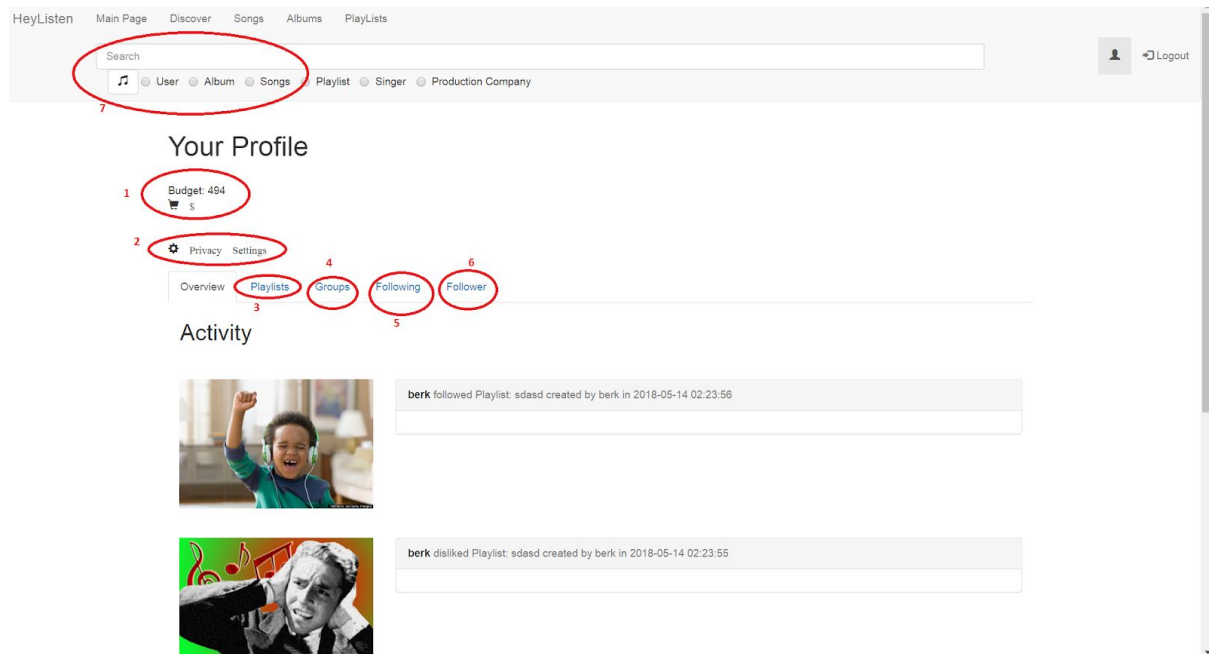

the user type. Guest is for music fans; musician and production company are for music makers. After a successful registration, user is directed to the main page.

7.3 Main Page

User can see followed users activities on the main page.

7.4 Overview

- 1-User can see his/her budget and by clicking the shopping basket user can add money to his/her account.
- 2- Privacy settings of the user can be changed, there are two buttons, user should select one and submit it with a submit button next to it.
- 3- User can see his/her playlists that he/she created, and the lists followed by user.
- 4- User's groups can be seen from this tab.
- 5- The followed users/artists can be seen from following.
- 6- Followers of user can be seen from this tab.
- 7- User can search users, albums,songs, playlists, singer and production company. And through the most upper tabs, user can go to Main page, discover etc. any time.

7.4.1 Overview (Change Settings)

The screenshot shows the 'Your Profile' page on the HeyListen website. The page header includes the site name 'HeyListen' and navigation links: 'Main Page', 'Discover', 'Songs', 'Albums', and 'PlayLists'. A search bar is located in the top right, and a 'Logout' button is next to a user icon. Below the header, the 'Your Profile' section displays a 'Budget: 484' with a shopping cart icon. A settings pop-up is open, showing tabs for 'Privacy' and 'Settings'. The 'Settings' tab is active, displaying four input fields: 'Enter Username:', 'Old Password:', 'New Password:', and 'Confirm New Password:'. Each field has a checkmark icon on the right. Below these fields is an 'Update Password' button. At the bottom of the pop-up, there are radio buttons for 'Private' and 'Public' privacy settings. The main profile area shows two profile pictures: the top one is of a child wearing headphones, and the bottom one is of a man singing into a microphone. To the right of the bottom profile picture, there is a notification that says 'berk disliked Playlist: sdasd created by berk in 2018-05-14 02:23:55'.

User can change user settings from the above pop-up. Old password should be equal to the new password. And new password should be entered twice. Update password button should be clicked. After selecting private or public user should submit it by clicking to the lock.

7.4.2 Overview (Add budget)

User can add budget by clicking to the shopping basket. User should enter card name, 16 digit credit card number, 4 digit expiration date and 3 digit CVC number then he/she should click submit button.

21

7.5. Playlists

In playlists page, user sees the playlists she created or she is following. Playlist's name, creator, date and number of songs in it are displayed. By pressing the button labeled by "1", a dropdown menu appears. It provides buttons to view the playlist in detail (directs to playlist's page, described at section 6) and to delete the playlist.

When add playlist button (labeled by "2") is clicked, a text box and a button appears. With this, user can create a new, empty playlist. Here is the new screen after the creation of new playlist:
